FLEXO

GLUING SYSTEM

**Non-Contact
Lap Gluing**

Leary
W. H. LEARY CO., INC. SINCE 1928

Precision non-contact lap gluing system.

Eliminate gluing quality concerns with Leary's new non-contact lap gluing solution.

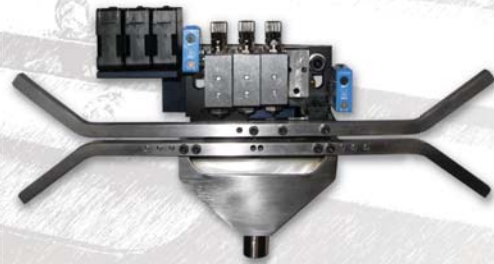

Leary's brand new non-contact gluing system for flexo folder-gluer delivers precise glue application at any speed. The non-contact station removes all potential snag points ensuring your box glides through the gluing section without skewing. The non-contact application method handles warped board as though it was perfectly flat, and ensures no glue smearing or wiping on any part of the box. Cleaning and downtime are all but eliminated with the introduction of the automatic nozzle flush system, which ensures your gluing system is ready to go as soon as you are.

The optional integrated glue detection system provides millimeter perfect inspection of all applied glue patterns. Leary's patented AutoGLUE™ closed loop glue detection technology remains the only self-correcting glue application, detection and correction technology in the marketplace; this exclusive technology ensures glue placement is not only 'in tolerance' but is perfectly positioned every time.

- ✓ Contactless application
- ✓ Ultra-high speed valves
- ✓ Millimeter perfect glue placement
- ✓ Glues warped board perfectly
- ✓ Automatic cleaning system
- ✓ Integrated glue inspection
- ✓ Maintenance free electric gluing valves
- ✗ No board skewing at gluing station
- ✗ No trapped tabs at gluing station
- ✗ No glue transfer to support plate/wheel
- ✗ No daily maintenance
- ✗ No mechanical adjustments
- ✗ No gluing problems

Large touch-screen control panel offers easy job setup, job storage, production data collection and real time visual glue pattern display.

The MasterJET™ gluing station with board guides, three independent gluing valves (4th valve optional) and integrated glue inspection.

MasterJET™ eliminates the gluing bottleneck, provides total gluing control and reduces downtime!

The MasterJET system is not speed limited in any way. It is built using gluing valves that operate in less than 2 milliseconds, these electric gluing valves do not have any wearing mechanical parts and will not slow down over time. They require virtually no servicing, operating for many hundreds of millions of cycles before needing service. This kind of valve technology not only provides you with total glue application control but also reduces downtime and service costs.

W.H. Leary offers a wide range of gluing and quality assurance solutions.
